

Using Safari on www.mixedbagdesigns.com

1. USING A COMPUTER

Often problems with Safari happen when temporary resources such as Web site cookies or caches become corrupted, and can cause pages to load incorrectly or not load at all, or even result in the browser crashing. A simple approach to fixing these problems is to clear these settings by going to the "Safari" menu and choosing "Reset Safari," followed by choosing the option to remove all Web site data, and possibly the other settings as well.

In addition to using the Reset Safari window, you can manually empty the cache by choosing that option in the Safari menu, and you can remove individual Web site data such as cookies by clicking the small Details button in the program's Privacy preferences. If for instance you can get one Web site to work but can't get another one to work, then you can use this option to locate and remove the cookies for the second site without disturbing the settings for the first one.

Located on the top right of the screen, there's an icon that looks like a wheel as shown below. Now click on the wheel and a drop down menu will appear. Then click on Preferences.

Using Safari on www.mixedbagdesigns.com

Next Click on the Tab that says Privacy and below where it says Block Cookies, set it to Never.

2. USING AN IPAD, IPHONE OR IPOD

You may want to update your Safari cookie settings when using your mobile device. You can access your Safari Settings by clicking on the “Settings” icon on your iPhone, iPod or iPad and then click on “Safari.”

To enable/disable cookies, simply locate the Privacy section and change the Accept Cookies option. Your choices are "Never", "Always" and "From Visited". The "From Visited" choice is the best for enabling cookies while keeping a moderate level of security but changing it to “**Always**” may solve any temporary issues you are experiencing. You can always change this setting back to your desired level later.
